Course Philosophy

Give a man a fish and you feed him for a moment; but show him how to fish and you feed him for the Lifetime'. Our belief in this thought-process is the central theme of the workshop that facilitate participants in improvising their 'Thinking Different' abilities. In the world of forensics, there is no standard craft to detect and investigate fraud and therefore we believe that each one has to constantly evolve by reinventing the three 'a's - adapt, adept and augment innovative ideas. This is possible only if a person sheds his fallacious filters that he has woven himself into, for which he needs to be drawn into an open environment that enables stretching his imagination. The best way to 'learn' is therefore to ride on other's experiences in a way that not only hones learner's skills but also retains the ownership of acquisition. We therefore assert that case studies are excellent way to learn and the best experiential learning emanates from accomplishments acquired from outside the mundane routines. With this philosophy, we bring live case studies from diverse domains that enable participants to share and learn from introspection and intra-spection. We only share our experiences amassed over the last more than two decades. This workshop is carved out of these notions.

A Three-day Certification Course*

Session 1&2: Window to the World of Frauds, Why fraud occurs? Types of frauds, Traits and motives of fraudsters and development guidance for investigators. Simple but effective forensic tests on documents and spreadsheets.
